DATE MAILED: 10/13/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/626,142

Applicant(s)

BURGIO ET AL.

Examiner

Michel Graffeo

Art Unit

1614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-80 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-80 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 3 Aug 06 (1st)
16 May 06 (1st)
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Status of Action

Claims 1-80 are pending and examined.

Applicant has provided arguments for the patentability of claims 1-80 in the response filed 25 May 2006. Applicant's arguments, see response, filed 25 May 2006, have been fully considered and are persuasive to the extent that the enablement rejection under 35 USC §112, has been withdrawn. Any rejection not specifically stated in this Office Action has been withdrawn.

Claim Rejections - 35 USC § 112 1st Paragraph

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6, 8-12, 14-20, 22-27, 29, 46-49 and 57-72 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. This is a written description rejection.

To satisfy the written description requirement, applicant must convey with reasonable clarity to one skilled in the art, as of the filing date that application was in possession of the claimed invention. A lack of adequate written description issue also arises if the knowledge and level of skill in the art would not permit one skilled in the art to immediately envisage the product claimed from the disclosed process. See, e.g., *Fujikawa v. Wattanasin*, 93 F.3d 1559, 1571, 39 USPQ2d 1895, 1905 (Fed. Cir. 1996) (a "laundry list" disclosure of every possible moiety does not constitute a written description of every species in a genus because it would not "reasonably lead" those skilled in the art to any particular species); *In re Ruschig*, 379 F.2d 990, 995, 154 USPQ 118, 123 (CCPA 1967).

Possession may be shown in many ways. For example, possession may be shown by describing an actual reduction to practice of the claimed invention. Possession may also be shown by a clear depiction of the invention in detailed drawings or in structural chemical formulas which permit a person skilled in the art to clearly recognize that applicant had possession of the claimed invention. An adequate written description of the invention may be shown by any description of sufficient, relevant, identifying characteristics so long as a person skilled in the art would recognize that the inventor had possession of the claimed invention. For example, a specification may describe an actual reduction to practice by showing that the inventor constructed an embodiment or performed a process that met all the limitations of the claim and determined that the invention would work for its intended purpose or an applicant may show possession of an invention by disclosure of drawings or structural

Art Unit: 1614

chemical formulas that are sufficiently detailed to show that applicant was in possession of the claimed invention as a whole.

An applicant may also show that an invention is complete by disclosure of sufficiently detailed, relevant identifying characteristics which provide evidence that applicant was in possession of the claimed invention, i.e., complete or partial structure, other physical and/or chemical properties, functional characteristics when coupled with a known or disclosed correlation between function and structure, or some combination of such characteristics.

The written description requirement for a claimed genus may be satisfied through sufficient description of a representative number of species by actual reduction to practice reduction to drawings, or by disclosure of relevant, identifying characteristics, i.e., structure or other physical and/or chemical properties, by functional characteristics coupled with a known or disclosed correlation between function and structure, or by a combination of such identifying characteristics, sufficient to show the applicant was in possession of the claimed genus. See *Eli Lilly*, 119 F.3d at 1568, 43 USPQ2d at 1406.

A "representative number of species" means that the species which are adequately described are representative of the entire genus. Thus, when there is substantial variation within the genus, one must describe a sufficient variety of species to reflect the variation within the genus. The disclosure of only one species encompassed within a genus adequately describes a claim directed to that genus only if the disclosure "indicates that the patentee has invented species sufficient to constitute the gen[us]."

Applicant has not conveyed possession of the invention with reasonable clarity to one skilled in the art. A "fluoride releasing group" is described in the specification on page 11 as the following:

20 ***FLUORIDE RELEASING GROUPS***

 Suitable fluoride releasing groups include fluoride salts as disclosed, for example, in U.S. Pat. Nos. 5,607,663 (Rozzi et al.), 5,662,887 (Rozzi et al.), 5,866,630 (Mitra et al.), 5,876,208 (Mitra et al.), 5,888,491 (Mitra et al.), and 6,312,668 (Mitra et al.). A preferred fluoride releasing group includes
25 tetrafluoroborate anions as disclosed, for example, in U.S. Pat. No. 4,871,786 (Aasen et al.). A preferred repeating unit of a fluoride releasing group includes trimethylammoniummethyl methacrylate.

Besides the tetrafluoroborate listed and the fluoride releasing groups disclosed in EP 0363095 to Minnesota Manufacturing and Mining Company, no other definition or explanation by way of example or function are provided for a "fluoride releasing group". Moreover, the instant Specification points to US Patent No. 5,607,663 and US Patent No. 6,312,668 for suitable fluoride releasing groups both of which contain virtually the same language cited as art over the instant claims and argued by Applicant. Therefore, the recitation of "fluoride releasing group" is not described in the Specification.

Response to Arguments - 35 USC § 112 1st Paragraph Written Description

Applicant's arguments filed 25 May have been fully considered but they are not persuasive. The monomers on page 10 which Applicant argues are described as

Art Unit: 1614

fluoride releasing groups are actually described in the Specification as the polarizable side group:

Polar or polarizable groups units may be derived from substituted or unsubstituted ammonium monomers of the general formula:

where R^2 , R^3 , R^4 , R^5 , L and d are as defined above, and where R^6 is H or alkyl of 1-12 carbon atoms and Q^\oplus is an organic or inorganic anion. Preferred examples of such monomers include 2-N,N,N-trimethylammonium ethyl (meth)acrylate, 2-N,N,N-triethylammonium ethyl (meth)acrylate, 3-N,N,N-trimethylammonium propyl (meth)acrylate, N(2-N',N',N'-trimethylammonium) ethyl (meth)acrylamide, N-(dimethyl hydroxyethyl ammonium) propyl (meth)acrylamide, or combinations thereof, where the counterion may include

For clarification purposes, the phrase "instant Specification points to US Patent No. 5,607,663 and US Patent No. 6,312,668 for suitable fluoride releasing groups both of which contain virtually the same language cited as art over the instant claims and argued by Applicant." on page 5 of the previous Office Action was intended to mean that the US Patent Nos. above provided the same definition of "fluoride releasing groups" as does the instant Specification and to that extent do not provide any further definition of written description.

Response to Arguments - 35 USC § 112 1st Paragraph Enablement

Applicant's arguments filed 25 May have been fully considered and are persuasive for reasons of record.

Claim Rejections - 35 USC § 102

Claims 1-3, 23-25, 30-32, 46, 49-50, 53-56 and 65-72 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0363095 to Minnesota Manufacturing and Mining Company.

The EP 0363095 reference discloses sealants, adhesives and the like (in current claims see page 3 lines 12-15) that are for example, brushed onto a dental surface (in current claims 53-56 and 65-72; see page 8 line 15) comprising tetrafluoroborate ions as fluoride releasing groups wherein the fluoride sources are compounds of Formula II:

II

wherein n is 4, R is methyl and further wherein the compounds of Formula II may serve as polymerizable fluoride sources if the R value comprises a moiety such as a methacrylate (see page 5 lines 40-45) as well as the compounds having the following formula comprising a hydrophobic fluorine-containing group:

Art Unit: 1614

The EP 0363095 reference also teaches fluoride releasing groups such as tetramethylammonium tetrafluoroborate, which absent evidence to the contrary, have the same functionality as trimethylammoniummethyl tetrafluoroborate as well as a fluoride source that may be polymerizable with a polymerizable monomer comprising straight or branched alkyl chains (in current claims 1-3, 23-25, 30-32, 46, 49-50; see page 3 lines 24-40). Finally, the EP 0363095 reference teaches peroxides which after application to the tooth are exposed to light (see page 7 lines 55-end).

Response to Arguments - 35 USC § 102

Applicant's arguments filed 25 May have been fully considered but they are not persuasive. Applicant argues that the '095 reference does not disclose a tooth whitening agent and a polymer as claimed in the instant Application. As noted above, the compound disclosed as Formula II may serve as polymerizable fluoride sources if the R value comprises a moiety such as a methacrylate (see page 5 lines 40-45) as well as the compounds having the following formula comprising a hydrophobic fluorine-containing group:

Additionally, the EP 0363095 reference teaches peroxides, which are tooth whiteners, which after application to the tooth are exposed to light (see page 7 lines 55-end).

Claim Rejections - 35 USC § 103

Claims 1-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0363095 to Minnesota Manufacturing and Mining Company and further in view of US Patent No. 6,083,421 to Huang et al.

The EP 0363095 reference discloses sealants, adhesives and the like (in current claims see page 3 lines 12-15) that are for example, brushed onto a dental surface (in current claims 53-56 and 65-72; see page 8 line 15) comprising tetrafluoroborate ions as fluoride releasing groups wherein the fluoride sources are compounds of Formula II:

Art Unit: 1614

wherein n is 4, R is methyl and further wherein the compounds of Formula II may serve as polymerizable fluoride sources if the R value comprises a moiety such as a methacrylate (see page 5 lines 40-45) as well as the compounds having the following formula comprising a hydrophobic fluorine-containing group:

The EP 0363095 reference also teaches fluoride releasing groups such as tetramethylammonium tetrafluoroborate, which absent evidence to the contrary, have the same functionality as trimethylammoniummethyl tetrafluoroborate as well as a fluoride source that may be polymerizable with a polymerizable monomer comprising straight or branched alkyl chains (1-3, 23-25, 30-32, 46, 49-50; see page 3 lines 24-40). Finally, the EP 0363095 reference teaches peroxides which after application to the tooth are exposed to light (see page 7 lines 55-end).

The EP 0363095 reference does not teach any particular amounts of peroxides.

Huang et al. further teach that oxides such as carbamide peroxide can be present in an amount of from 6 to about 20% (in current claims 4, 8-14, 18, 26, 33, 37-40, 44, 46-51, see Abstract).

One skilled in the art would be motivated to combine the EP 0363095 reference with Huang et al. since both are directed to teeth whitening compositions comprising peroxides which can be applied as a topical coating (see col 2 lines 35-40). Thus, the

Art Unit: 1614

claimed invention of the composition was within the ordinary skill in the art to make and use at the time it was made and was as a whole, *prima facie* obvious.

Claim 35 is rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0363095 to Minnesota Manufacturing and Mining Company as applied to claims 1-80 above taken with US Patent No. 4,018,732 to Lakshmanan.

The EP 0363095 reference does not recite the hydrophobic hydrocarbon octadecylacrylate specifically.

Lakshamanan discloses an oral adhesive material with includes octadecyl acrylate (see col 1 lines 54-55).

One of skill in the art would be motivated to combine the EP 0363095 reference with Lakshamanan and as combined would make the above claim obvious. Both references are directed to oral care compositions. Further, the EP 0363095 reference describes a hydrophobic composition such that one skilled in the art would expect success by substituting the octadecyl acrylate of Lakshamanan for the acrylate page 5 line 43 of the EP 0363095 reference. Thus, the claimed invention of the composition was within the ordinary skill in the art to make and use at the time it was made and was as a whole, *prima facie* obvious.

Response to Arguments - 35 USC § 103

Applicant's arguments filed 25 May have been fully considered but they are not persuasive. Applicant argues that the '095 and Huang et al. references do not disclose

Art Unit: 1614

a tooth whitening agent and a polymer as claimed in the instant Application. The '095 reference is discussed above and such discussion applies to this rejection under 103.

Regarding the Huang et al. reference, Huang et al. do are not required to teach a combination of polymer and tooth whitener for this rejection, but have been sited to teach a percentage of tooth whitener. To that end, Huang et al. further teach that oxides such as carbamide peroxide can be present in an amount of from 6 to about 20% (in current claims 4, 8-14, 18, 26, 33, 37-40, 44, 46-51, see Abstract):

Conclusion

No claim is allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
